

Dog Leg - Electric Golf Caddy

Dog Leg is an electric golf club carrier ("Caddy") that will bring you a new joy of the game. It is made from stainless steel, in minimalistic, timeless design, equipped with modern processor control. Special collapsible design enables easy folding and unfolding within a few seconds. What is important: the height of an unfolded carrier is 5 cm maximum. No wonder you will fit it inside any sports car. The handling bar with a grip can be easily adjusted to your height. All the Dog Leg functions, such as speed or parking brakes, can be controlled by a single button on the handle bar. This allows simple and safe operation by both right and left-handers. Two powerful motors (300W) take care of smooth movement.

Electronic processor control monitors the motors, connected by a self-locking differential that turns the wheels with different power consumption. At the same time, it keeps the pre-set constant speed, brakes downhill, and checks Dog Leg battery. Li-Ion battery of capacity 15.4 Ah. When fully charged, the battery will suffice to manage 27-hole course with a moderately difficult terrain.

The above-mentioned parameters guarantee optimum comfort, both on the course and in the transport of Dog Leg there and back.

Parameters and features:

Design: Elegant and durable metal body
Dimensions: (64,5 x 69,5 x 5) cm
Weight: 10,5 kg
Weight: 6,5 kg (without battery)
Load capacity: up to 25 kg

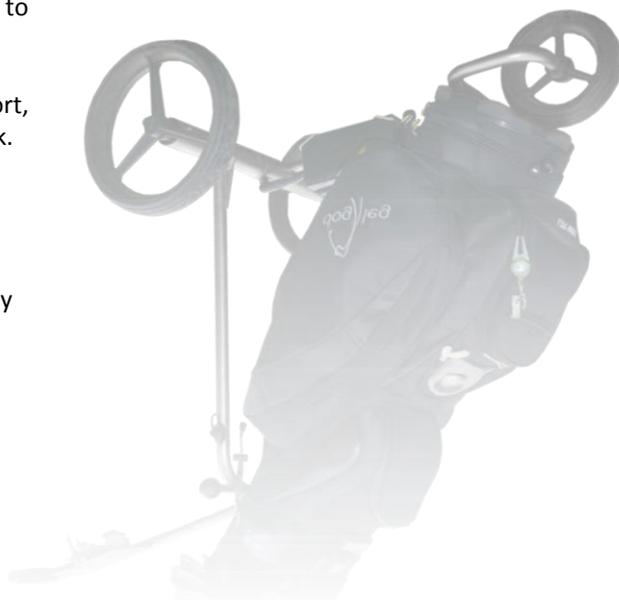

Charging input: Charging connector
Power source: 14.8 V/15.4 Ah battery with a switch, indication, and electronics

Operating time: Up to 27 holes (fully charged)
Charging time: 12 hours (discharged battery)

Indicators:

- ON (OFF) status
- BATT – internal battery status
- CHRГ – charging status

Colour: Stainless gloss, stainless matt

- ① Assembled "Dog Leg" golf carrier
- ② "Golf-bag" by Bennigton
- ③ "Scorecard" holder
- ④ 14.8 V/15.4 Ah battery, with switch, indicators and electronics
- ⑤ Charger (230 V/50 Hz) or Car socket charger 12 V (on order)
- ⑥ assembly and other accessories
- ⑦ Rear wheels
- ⑧ Stainless bearing rod with electromotors
- ⑨ Front wheel

Design & technology

This electric golf club carrier will attract attention on any golf course due to its timeless and minimalistic design. The design and various options will always make you happy. Both qualified engineers and enthusiastic golfers have participated in its development.

The main attributes are: reliability, easy transport, fast assembly and folding after use, maintenance-free, simple service, and easy replacement of major parts.

Reliability

Above-standard electric golf club carrier must serve the user throughout the year, in any weather.

Therefore, Dog Leg has been made from stainless gloss or matt steel. The surface finish is based on the best golf practice.

Strengths: Dog Leg will forgive you even a bit of thoughtless treatment in transport.

Set and assembly

Dog Leg takes just a little space, and can be assembled using just a few trained movements: just put the wheels on, tighten the screws, and fix the battery. Finally mount and fix the bag, and that's it!

The whole procedure takes less than a minute, and you are all set for the golf course. Transport in a small sports car is possible.

There is another benefit brought to you by the electric carrier. It's not only about the golf resort services, which come as a matter of course, but also a simple transport there and back. Dog Leg reminds of a perfect puzzle: when folded, it is 5 cm in height.

Service and repairs

Maintenance-free operation.

The driving assembly includes two Swiss motors and a German driving mechanism, placed inside a tube, without any need of maintenance, just like the wheel hubs. The entire processor control is included in the battery box. Thus, the electronic components are protected. Only the battery itself is removed when replaced.

Performance and operation.

When fully charged, Dog Leg will accompany you all through 27-hole hilly golf course. Dog Leg is equipped with a strong battery of 15.4 Ah capacity.

Special motors (300 W) will manage lightly and in silence any usual ascent. Golf carrier with such features is not common in the market.

Battery and charger

Li-Ion battery 14.8 V / 15.4 Ah is in a special box together with the controlling electronics. It can be connected using short connection cable with a plug. Battery weighs 1.9 kg. The charger is included in the set.

You may also order car socket charger 12 V.
